

Patient: Brett Bradshaw (105960)

Review Date: 5/31/2024 1:33 AM
Order Date: 5/16/2024 10:00 AM
Report Date: 5/21/2024 10:31 AM
Performed Date: 5/16/2024 10:00 AM
Procedure [Final, Reviewed]: DEXA SCAN WHOLE BODY (77080)
Diagnosis: ROUTINE HEALTH MAINTENANCE (Z00.00)
Requisition ID: 1000026169

Patient DOB: 3/24/1977

Reviewed by: Malcolmson, Michelle MD
Ordered by: Malcolmson, Michelle MD

Procedure Note: See Note

(Procedures:
Dexascan examination.

Indications:
Screening.

Findings:

Left Total Femur:
The bone mineral density is 0.895 gm/cm sq. T-score is -0.9. Z-score is -0.6.

Right Total Femur:
The bone mineral density is 0.884 gm/cm sq. T-score is -1.0. Z-score is -0.7.

Left Femoral Neck:
The bone mineral density is 0.738 gm/cm sq. T-score is -1.4. Z-score is -0.7.

Right Femoral Neck:
The bone mineral density is 0.753 gm/cm sq. T-score is -1.3. Z-score is -0.6.

Lumbar Spine L1-L4:
The bone mineral density is 0.850 gm/cm sq. T-score is -2.2. Z-score is -1.9.

A FRAX (Fracture Risk Assessment Tool) score is used to determine your 10-year risk of major osteoporotic fracture-that is, the risk of fracturing your spine, hip, forearm, or shoulder over the next decade. Your FRAX score is calculated based on 12 personal, lifestyle, and medical factors including the DEXA data.

Your 10-year fracture risk:

Major osteoporotic fracture (left hip):3.1%

Major osteoporotic fracture (right hip):3.0%

Conclusions:
According to the World Health Organization* and National Osteoporosis Foundation classification, the classification is borderline osteopenia, as the Z score is near -2.0 (for individuals less than 50 years old).

For year-over-year analysis, the total proximal femur is always used to evaluate and report change.
